

## **SMART LIPO**

SMART LIPO is the latest technology in liposuction for smaller areas. Also known as Laser Body Sculpting, this procedure is less invasive than traditional liposuction methods and requires little recovery time. The laser technology offers better skin retraction and tightening post operatively, resulting in a smoother more natural result.

## **Vaser Liposuction**

The most recent generation of ultrasonic liposuction. Vaser liposuction is effective for individuals who need treatment of larger problem areas.

## **Tummy Tuck**

Patients with extra abdominal skin following weight loss or pregnancy may want to consider a tummy tuck (abdominoplasty). This procedure removes loose abdominal skin and may involve tightening the abdominal muscles at the same time to offer a flatter, tighter tummy.

## **Body Contouring After Major Weight Loss**

Individuals who have lost significant amounts of weight are often left with large amounts of unwanted skin. At *Puget Sound Plastic Surgery* we can customize a plan to remove this extra skin. These procedures can offer the weight loss patient a final reward in their journey.

lease honor us with your presence at *Puget Sound Plastic Surgery's* first ever informational Open House on body contouring!
